ARTIFICIAL INTELLIGENCE RESEARCH GROUP

Artificial Intelligence Lab *extended*: Consortium of three VUB research groups

Interdisciplinary team that performs **fundamental** and **applied** research

Artificial Intelligence Lab
Symbolic and subsymbolic AI,
Agnostic and cognitive AI

Digital Mathematics

Mathematical aspects of data science
foundations for data acquisition,
representation and analysis

Data Analytics Lab

Applied data science, business-
oriented

Presentation at 15.30

VUB Artificial Intelligence Lab

Guide enterprises through the AI revolution and help them become more innovative and increase their excellence through the potential of AI

Research

Collaborating **intensively** on fundamental, strategic and applied research

Education

Education programs for (under)graduate students...

Bachelor in AI starting 2022

... and professionals

Lifelong Learning Program

Services to society

Bringing researchers, industry and policymakers **together**

Presentation at 11.10

VUB AI Experience Centre (founded 2019)

- “One-stop shop” for everyone interested in AI
 - Meeting place for researchers, companies, policymakers and the general public
 - Offers training, consultancy, research projects
 - Showcases demonstrators/prototypes and test infrastructure
 - Used for seminars, company visits, events
- Partnership between multiple VUB research groups
 - Not only technological but also sociological and ethical aspects

1 AS ONE PROGRAM

Our research: multi-agent collaborative AI

- AI systems are not standalone
 - they act in an **environment**
 - they **interact** with **humans**

Agents in a smart grid model

- Focus on **online**, **adaptive** and **dynamic** learning algorithms
- Not only **learning**, but **acting** from knowledge

AI Lab research

Reinforcement learning and **multi-agent systems**

Language processing & *interaction*

Emergent communication

Hybrid AI

Data science and **business** analytics

Knowledge **representation** and **reasoning**

Computational **creativity**

Brief history of AI: the different movements

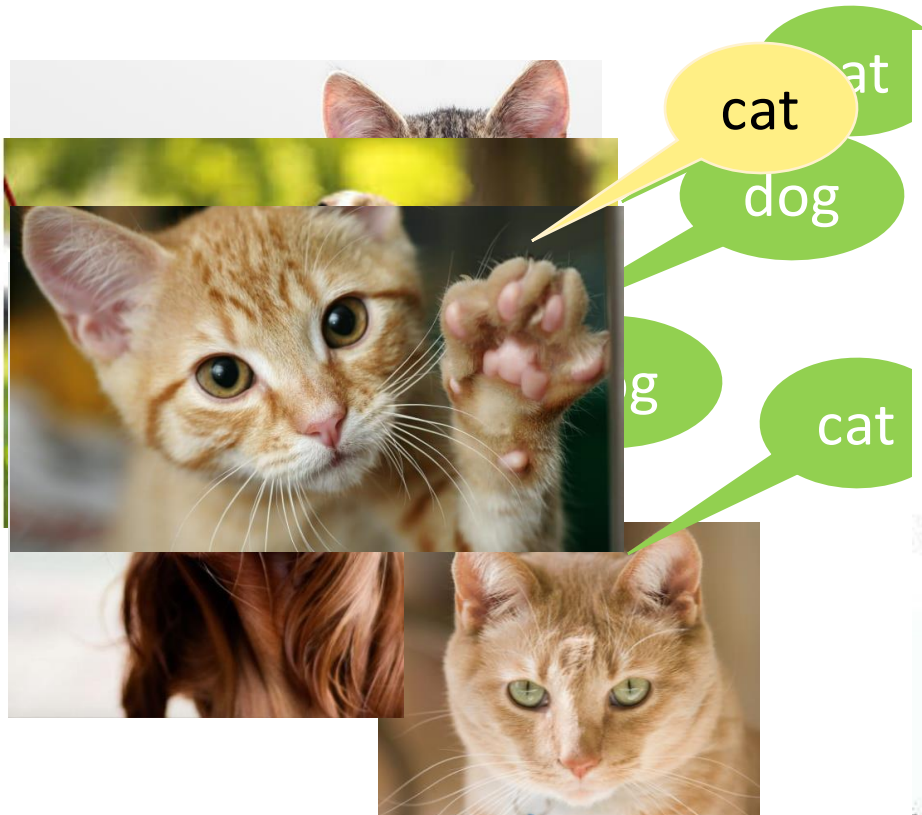

50s 60s 70s 80s 90s 00s 10s 20s

Subfields of Machine Learning

Supervised

Reinforcement

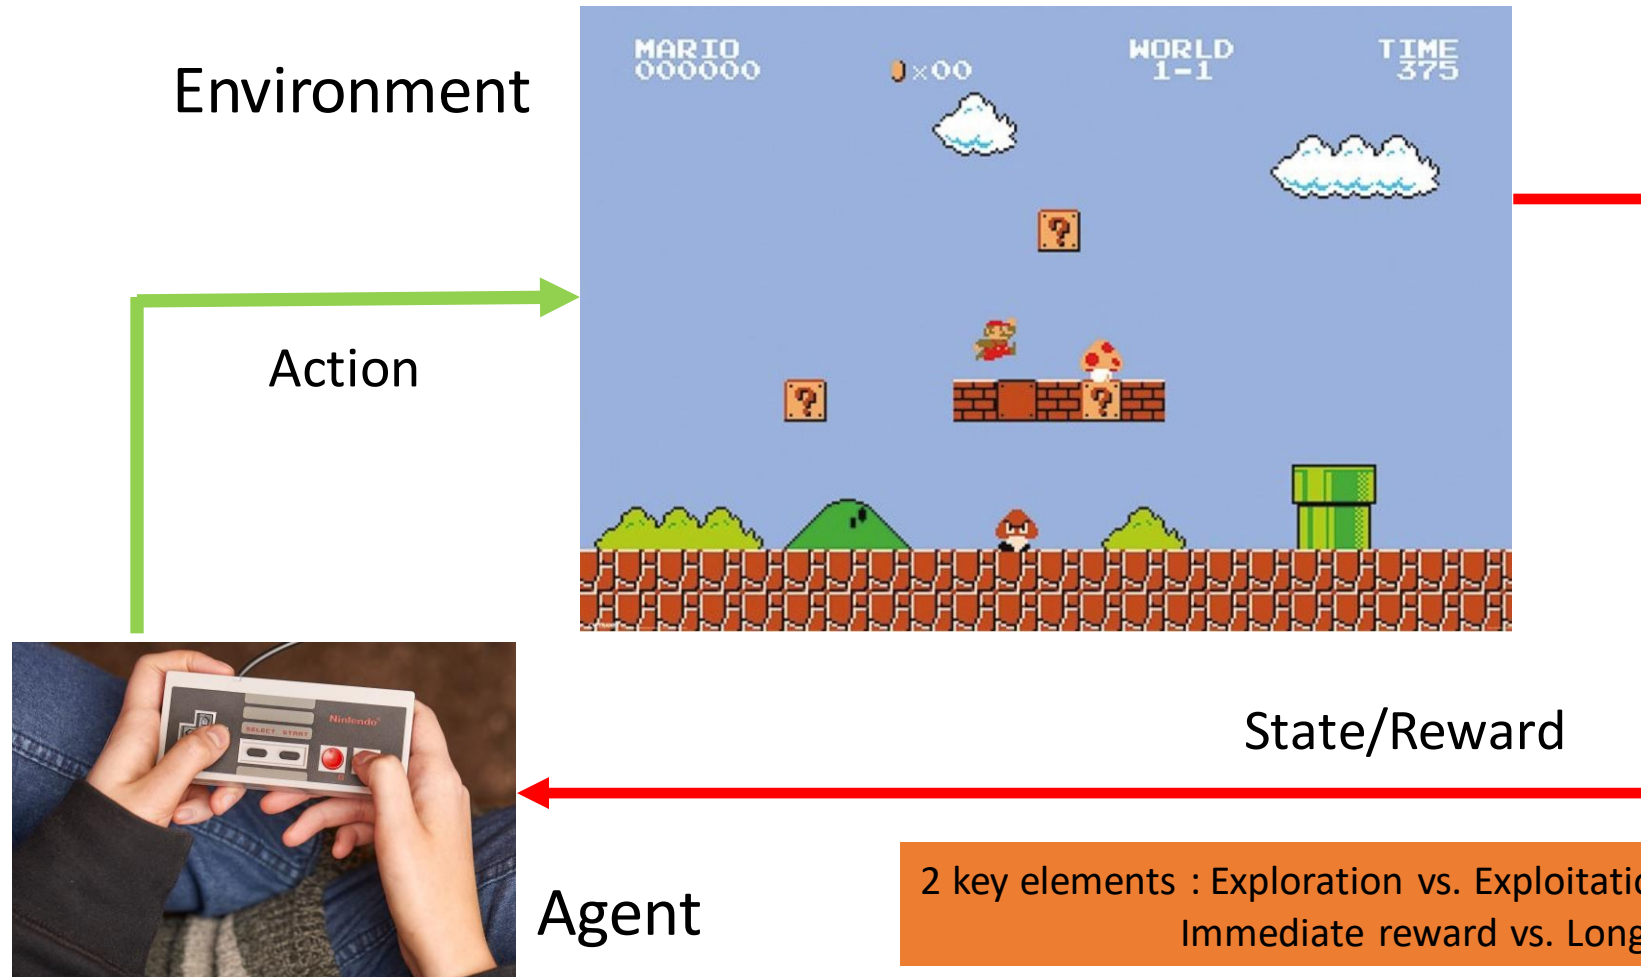

Unsupervised

Reinforcement Learning

Learning from interactions

2 key elements : Exploration vs. Exploitation
Immediate reward vs. Long term reward

Exploration versus exploitation: bandits

Finding the best epidemic mitigation strategy

Close school

Close restaurants

Close non-essential shops

Close shops & restaurants

Exploration versus exploitation: bandits

Finding the best epidemic mitigation strategy

Close school

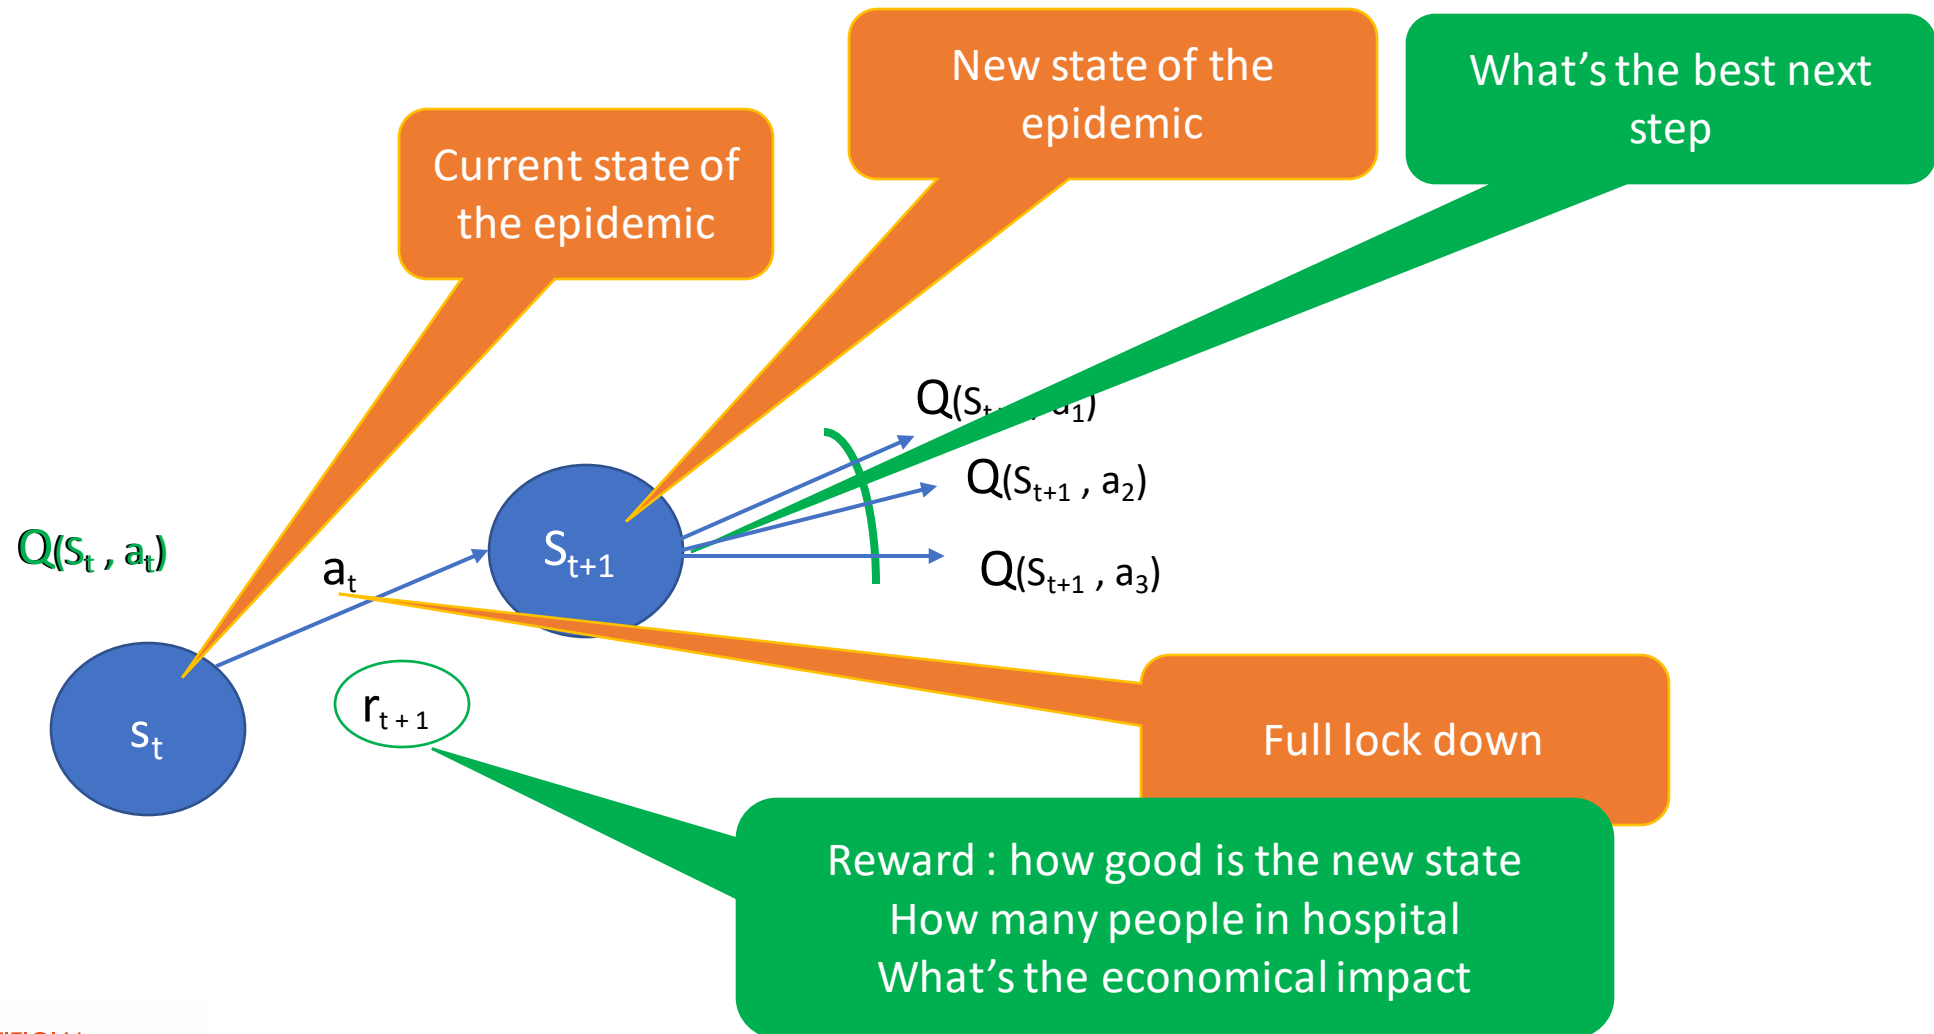

Close restaurants

Close non-essential shops

Close shops & restaurants

Immediate and long-term reward

Applications of reinforcement learning

AlphaGo

Exploration of 5.12×10^{20} possible configurations of the game

Space Shuttle
Attitude Control

Difficult non-linear controller, higher optimality with RL than classical control

Datacenter cooling

Exploration of the impact of decisions on long time-scales

AlphaFold

NEWS | 30 November 2020

**'It will change everything':
DeepMind's AI makes gigantic leap
in solving protein structures**

Google's deep-learning program for determining the 3D shapes of proteins stands to transform biology, say scientists.

AI Lab Expertise

Innovation Tracks

- ❖ Document Layout Analysis
- ❖ Language Processing
- ❖ Reasoning with 'concepts'
- ❖ Signal compression & decompression (sound, EEG, ...)

Human-Like AI

Adaptive Learning & Collaborative AI

- ❖ Control for Industrial Machines
- ❖ Planning and coordination of UAVs and AGVs
- ❖ Resource Optimization (smart grids, logistics, mobility, ...)

Sub-tracks

- ❖ Explainability, transparency, fairness, Bias, Safety, ... in AI
- ❖ Cybersecurity
- ❖ Fraud analytics
- ❖ Digital Forensics
- ❖ AI Coaching, trainings, Audits, testing, consultancy, ...

AI Maturity & Safety

Decision Intelligence

- ❖ Data Analytics
- ❖ Process optimization
- ❖ Inverse Design (Molecules)
- ❖ Recommender Systems
- ❖ Decision Making
- ❖ Define strategies based on models

More on RL?

Reinforcement Learning: an introduction

R.S. Sutton and A.G. Barto

Available for free online

Reinforcement Learning: State-of-the-Art,
M. Wiering and M. van Otterlo

Covers more advanced topics

steckdenis.be/phd_thesis.pdf

A Gentle introduction to Reinforcement Learning

Ann Nowé & Tim Brys

Reinforcement Learning

How does RL work?

Q-Learning

Q(lambda)

Two main approaches

- Learn how good it is to apply a certain action in a given state (**value-based approaches**)

Q-learning → DQN, Rainbow

- Evaluate a given policy, and try to improve the policy (**actor critic methods**)

Policy Gradient → Soft Actor-Critic

BDPI

Applications of Reinforcement Learning

Exploration of 5.12×10^{20} possible configurations of the game

AlphaGo

Difficult non-linear controller, higher optimality with RL than classical control

Space Shuttle attitude control (1993)

Exploration of the impact of decisions on long time-scales

Datacenter cooling

Material- and temperature-dependent complex fluid dynamics (air)

Weaving Machine

Multi-agent collaborative AI

- **Multi-agent learning:** AI systems are not standalone and have to coordinate between each other
- **Reinforcement learning:** AI systems are embedded in an environment and can learn from interacting with that environment

real-life traffic interactions

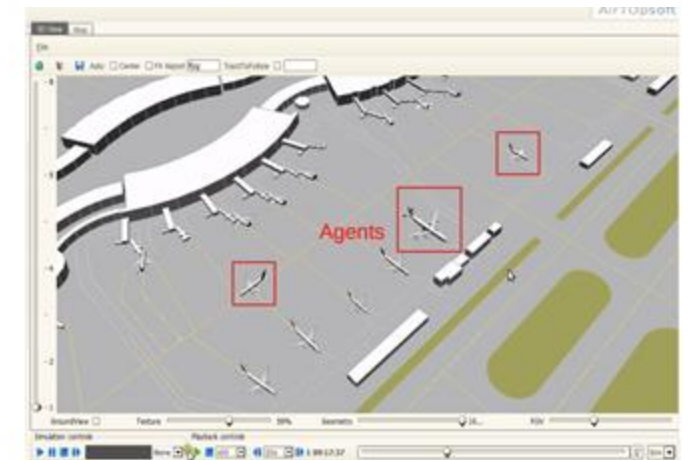

AI agents interactions

Departure management of planes in airports using multi-agent reinforcement learning

- Goal: learn **optimal scheduling** of departing planes
- Optimizing different constraints
 - Maximizing on-time departures
 - Minimizing fuel consumption
 - Minimizing noise emissions
- Particularly difficult for **complex airport layouts** with many different runways
- On a simulator of CDG and JFK airports, the algorithm was able to significantly **improve the number of on-site departures**, compared to a human controller using traditional heuristics
- The multi-agent algorithms can also be used for on-route and arrival scheduling of planes

Paris Charles de Gaulle Airport (CDG)

New York John F. Kennedy Airport (JFK)

Reinforcement learning to optimize charging of electric vehicles

Scheduling algorithm for charging of EVs (electric vehicles)

Challenges

- **Constraints** (# charging connectors, maximum load of the grid, minimize charging time, maximize battery lifetime, minimize charging cost, etc.)
- **Uncertainties** (arrival and departure of EV, amount of energy needed to charge battery, available green energy, etc.)

Solution

- **Dynamic** algorithm needed
- Reinforcement learning learns the optimal scheduling through a simulator, taking into account **changing and implicit behavior** and **external factors** such as weather, traffic, etc.

RL and digital twins

Expected skill execution

Multiple agents

To find the MOST CHALLENGING
problems to solve

To EXTEND the reach of what is KNOWN
and FEASIBLE in the field of AI

→ Our **RESPONSIBILITY** to society

→ What **DRIVES** our people

To find the MOST CHALLENGING problems to solve

To EXTEND the reach of what is KNOWN and FEASIBLE in the field of AI

→ Our **RESPONSIBILITY** to society

→ What **DRIVES** our people

Networks and partners

How we do this?

1. Attract **great people**
2. **Focus** on our expertise fields within AI
3. The right **interdisciplinary network**
4. Collaboration with **private sector**

IOF GEAR Proposal 2022-2026: Consolidator (200K / year)

Context

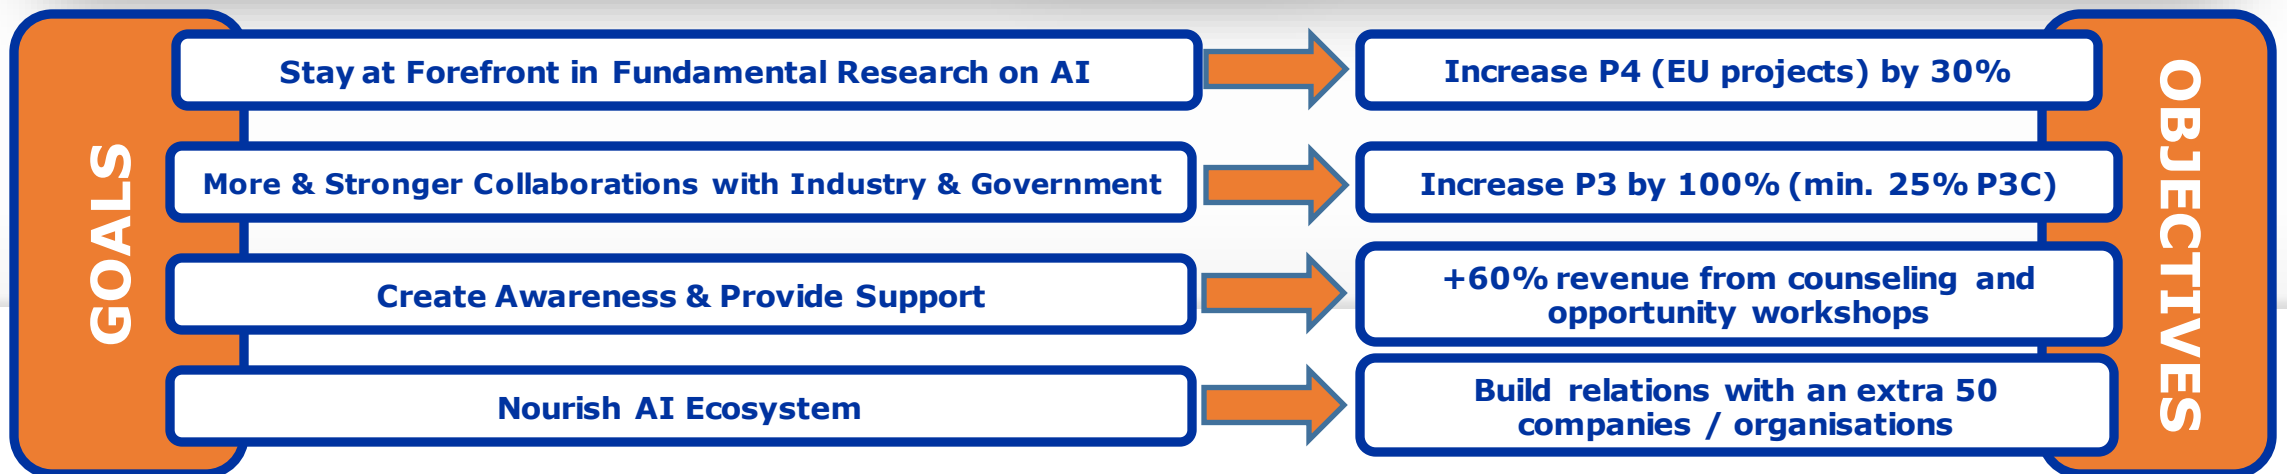

- Interdisciplinary team
- Long-standing expertise & heritage
- Strong reputation

Rationale

- Overwhelmed with AI
 - Joint Research of high-quality AI technologies
 - Provide guidance

Vision & Mission

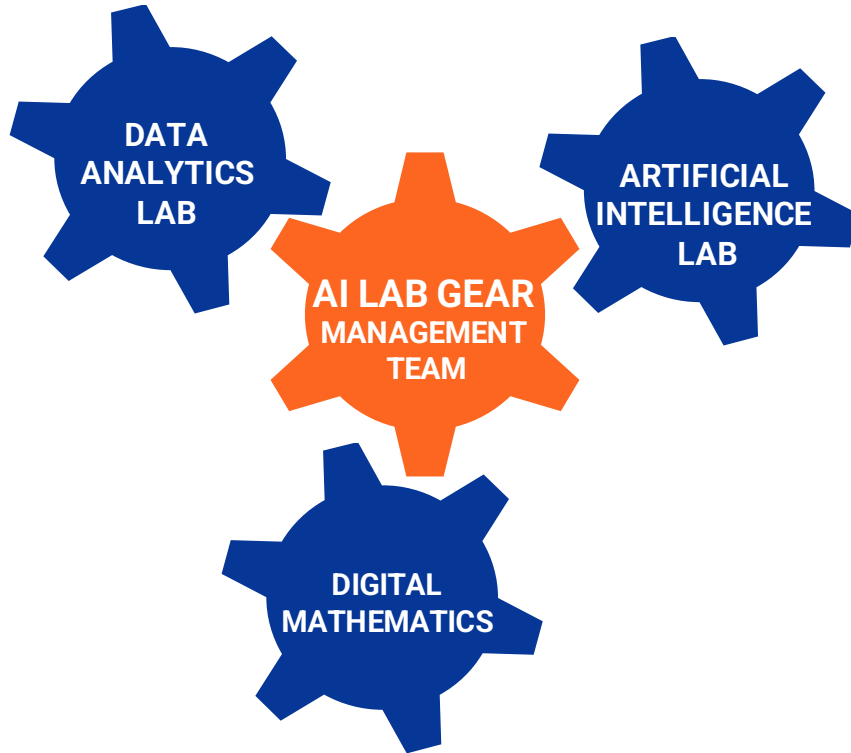

- Initiate and mature **high quality AI technologies** (through research)
- **Interact and collaborate** with decision takers at different steps to ensure relevancy

VUB Artificial Intelligence Lab

Interdisciplinary team, Strong heritage, Leading position

- Academic network

- Outreach to industry and policymakers

- Unique interdisciplinary team

- With **complementary** AI expertise
- Collaborating **intensively** on fundamental, strategic and applied research
- Bringing researchers, industry and policymakers **together**

AI Experience Center

- **One-stop-shop** for all AI research & training needs
 - **Legal, ethical** aspects of AI (LSTS)
 - **Sociological**, ethical side of AI (AI Lab, Data Lab, SMIT)
 - **Smart city, mobility** (SMIT, MOBI, Data Lab, AI Lab)
 - **Industry 4.0 & Robotics** (Brubotics, MFYS, AI Lab)
 - **Health** (AI Lab, ETRO, Brubotics)
 - Broader **VUB Network**
- **Broker** for innovation & implementation
 - **AI Opportunity** Workshops, Deep Dive sessions, ...

AI Lab Mission

Guide enterprises through the AI revolution and help them become **more innovative** and **increase their excellence** through the potential of AI

- Types of collaborations:
 - internships, bachelor and master theses, training, consultancy, applied PhDs, R&D projects, etc.
